in2being Capabilities

Led by seasoned startup and industry veterans, in2being has completed over 175 projects since our founding in 2010 for clients ranging from Fortune 500 medtech companies to small clinician-inventor startups.

in2being handles everything from early prototypes to FDA design control development and design for manufacturability. Our specialties include vendor and project management, custom verification testing, and regulatory support. We assist with regulatory strategy, submission writing, and FDA interactions. These include 510(k) submissions, pre-submissions, breakthrough device pathway, and more.

We excel in developing first-in-human prototypes for IDE/IRB clinical trials with stage-appropriate levels of design control, document control, and verification testing.

- ✓ Early Prototypes
- ✓ FDA Design Control Development
- ✓ Design for Manufacturability
- ✓ Vendor Management
- ✓ Project Management
- ✓ Custom Verification Testing
- ✓ Testing Management
- ✓ Regulatory Strategy
- ✓ FDA Submission Writing
- ✓ Submissions to the FDA
- ✓ Regulatory Clearance
- ✓ First-in-Human Prototypes

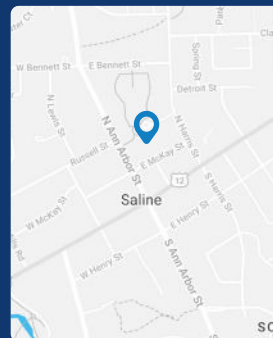

Development Expertise

Our development expertise includes detailed, hands-on product development and design for manufacturing, including mechanical, electrical, and embedded systems design.

We maintain in-house mechanical and electrical prototyping capabilities and perform design for manufacturing for transfer of design packages to production manufacturing partners.

Convenient Location

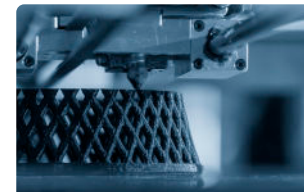

in2being operates out of a 3600 ft² office and lab space in downtown Saline, Michigan. We're conveniently located 30 minutes from Detroit Metropolitan Airport and close to the high-tech hotbed surrounding University of Michigan.

📍 131 E Michigan Ave, Ste E, Saline, MI 48176

Prototyping Capabilities

Our prototyping space contains complete electronics assembly capability, CNC machining, as well as robust 3D printing and soft casting facilities. We also have in house testing capabilities for custom testing when required.

Our team includes project managers, engineers, and technicians who have backgrounds designing and working on medical devices from concept through market clearance.
